Integration of knowledge extracted from text and data as open-world semantic graphs

Aldo Gangemi

LIPN, Université Paris 13, UMR CNRS, Sorbonne Cité Semantic Technology Lab, ISTC-CNR, Rome/Catania, Italy aldo.gangemi@lipn.univ-paris13.fr

Core machine reading people from STLab:
Andrea G. Nuzzolese
Valentina Presutti
Diego Reforgiato Recupero

SW and LOD

- The Semantic Web is a loosely defined program to make web semantics more explicit and machine-processable
 - W3C standards: RDF, OWL, SPARQL, RIF, JSON-LD
 - Triple languages (RDF as abstract data structure)

inferences

- Linked (Open) Data is a set of principles to publish data on the Web
 - open formats
 - W3C triple formats (RDF, JSON-LD, SPARQL)
 - URI
 - vocabularies (aka schemas or ontologies)
 - links (owl:sameAs the most used)

LOD - NLP interface

- Reuse NLP output in LOD (triple enrichment)
- Reuse LOD in NLP systems (background knowledge)

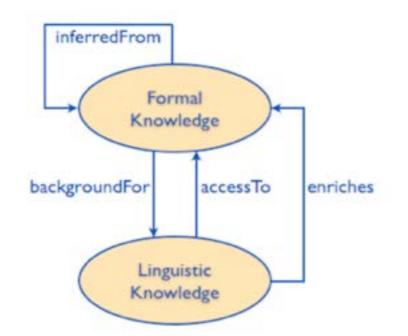

Knowledge Extraction and the SW

- Historically SW mainly worked on ontology learning
 - unconvincing results: sparseness, core knowledge difficult to catch, etc. (cf. Coppola et al. 2009, Blomqvist, 2009)
 - natural language understanding known to be an Al-complete problem
- The paradigm of machine reading (Etzioni, 2006) fits the lightweight and/or data-driven trend of current SW

More important, semantic technologies in the large need

hybridization

QA, NL querying on LD, full text search jointly with queries, ...

Apple Siri, Google Now, SRI startup Desti

Facebook Social Graph

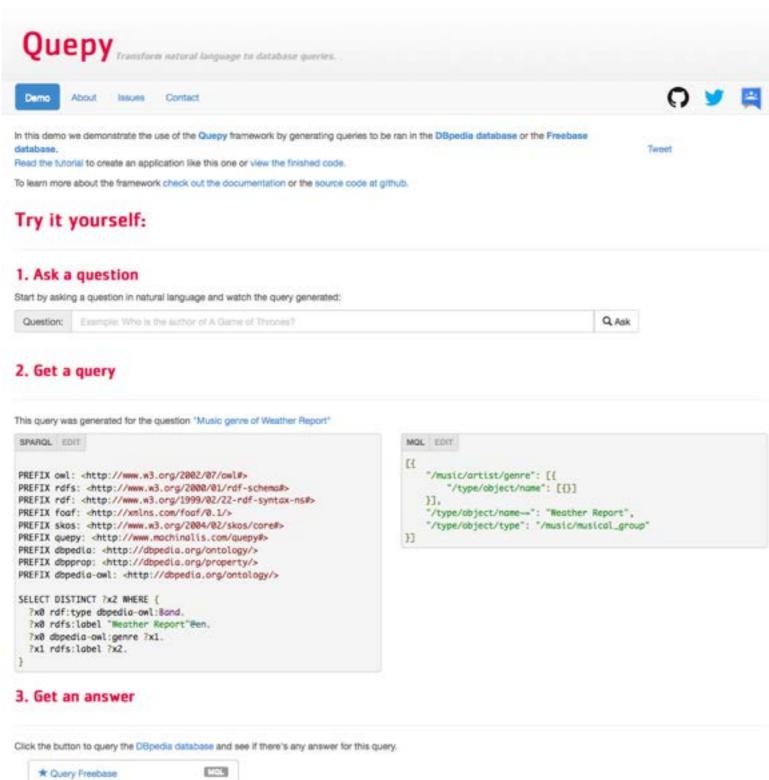

Google Knowledge Graph

IBM Watson

OIE, NELL, BabelNet, ...

Some projects in the interface

- Projects dealing with the architecture of the interface
 - Apache Stanbol (platform for integrating LOD querying, indexing, and refactoring with NLP text analyzers)
 - NERD (integration of NER systems)
 - FOX / conTEXT (LOD hybridization and visual analytics out of NER)
 - FRED (LOD hybridization out of multiple NLP analyzers, running on top of Boxer, Stanbol, WSD, NER, plus pattern-based NL semantics)
- Projects using the interface
 - DELPH-IN (RDF for Minimal Recursion Semantics)
 - Quepy
 - BabelNet, OIE, NELL, IBM Watson, Google KG, ...

Interpretation: (\$x, be largest city in, sicily)

4 results from "what is largest city in Sicily?"

Evidence for: (catania, be largest city in, sicily)

- With around three hundred and twenty thousand inhabitants Catania is the second largest city in Sicily. (via ClueWeb12)
- 2. Catania is the second largest city in Sicily and the tenth largest in Italy . (via ClueWeb12)
- Catania is the second largest city in Sicily after Palermo . (via ClueWeb12)
- After Palermo , about 250 kilometres away , Catania is the second largest city in Sicily . (via ClueWeb12)

"The Black Hand might not have decided to barbarously assassinate Franz Ferdinand after he arrived in Sarajevo on June 28th, 1914"

FRED's architecture

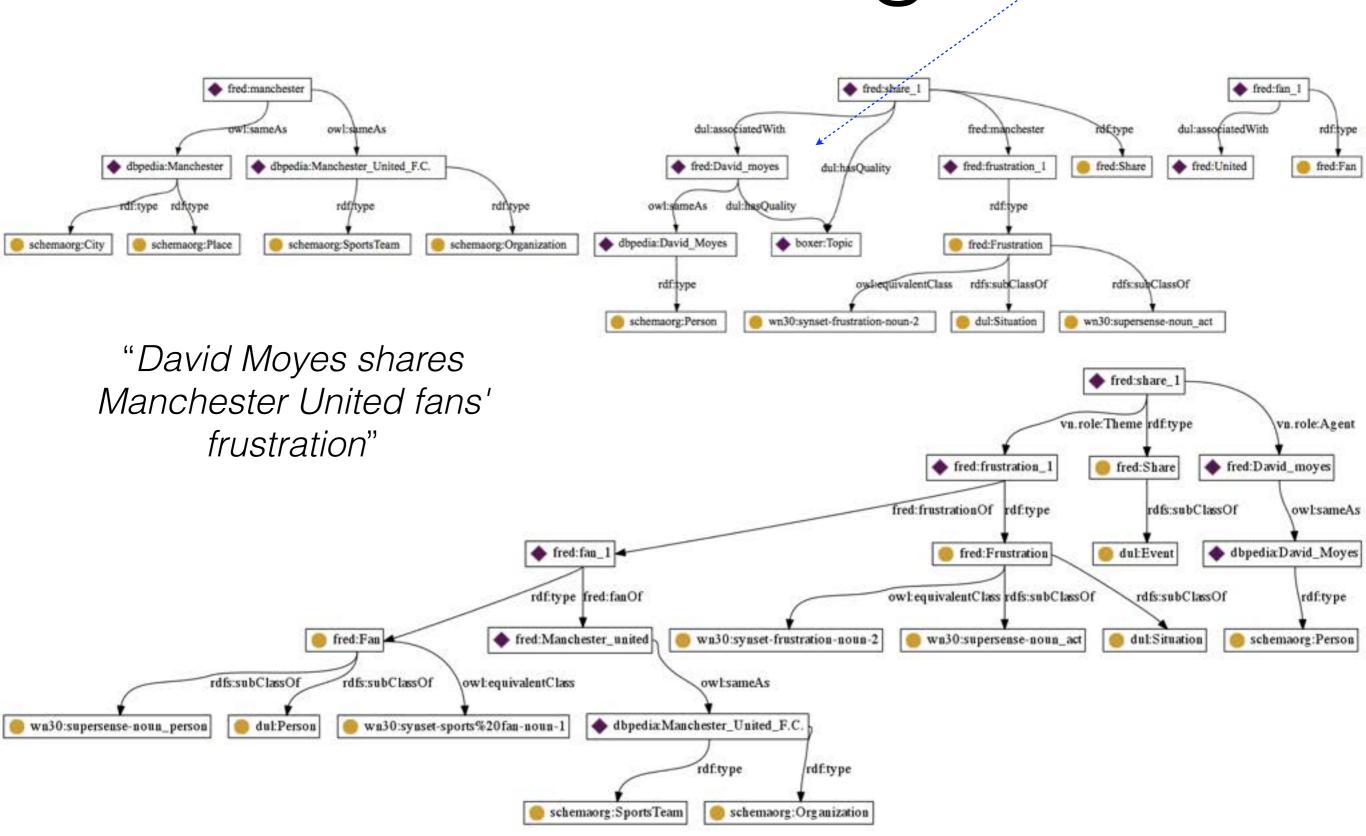

Superfresh results

- Evaluation on a set of named graphs produced from a composite sample of sentences with 4 text types
- Named graphs modularized by motifs: query patterns that extract elementary logical patterns
- Gold treatment of graphs by expert annotators, good inter-rater agreement (Kendall's W)
- Implemented method to create NL/SW graph banks
 - analogous to syntactic treebanks, meaning banks
